## 前沿资讯

### **1. Threat to European Barley Leads to Opportunity in Argentina (欧洲大麦受威胁为阿根廷提供机会)**

简介： John Barleycorn lived an eventful and thankfully fictional life in medieval England, having been tortured, killed, drained of his blood, and then resurrected every year. He existed as an allegory for the then-critical barley crop, prized for its nutritional value and its use in alcohol production...not necessarily in that order. After nearly 20,000 years of cultivation, barley still ranks fourth in production by weight of grain worldwide, behind corn, rice, and wheat. Despite the crop's undeniable importance, it doesn't get very much attention in the press, likely due to the lack of an active futures contract. But even if futures and options traders don't care too much about barley, it remains essential to livestock feeding, beer brewing, and whiskey distillation. Anyone professionally interested in meat, beer, or whiskey should probably monitor the crop. In this article, we will show you some ways to stay up to speed using Gro Intelligence's agricultural analysis product.

### **2. China Lifts Ban on Imports of French and British Beef (中国放宽对英国和法国的牛肉进口限制)**

简介： During the week of June 24, 2018, China lifted its long standing ban on imports of beef from both France and the United Kingdom. France and China have negotiated an export protocol and France will be able to export beef once their plants are officially registered. The United Kingdom will still need to negotiate an export protocol. In response to the U.S. 301 Investigation, China has announced that effective July 6, 2018, U.S. beef could face applied tariffs as high as 50 percent, depending on the beef cut.

## **2. Thailand retail foods (泰国零售食品)**

简介: Thailand's retail food sector continues to grow in 2017, driven by strong economic growth, increasing numbers of tourists, and government investment. Thailand is one of the world's leading agricultural suppliers, primarily due to its well-developed food processing sector. The food industry is the country's third largest industry, contributing 23 percent to the country's Gross Domestic Product (GDP). As a result, Thailand is competitive market for food and beverage products. However, there is good sales potential for a number of products including food preparation ingredients, whey, frozen potatoes, apples, milk and cream, pet food, almond nuts, and raisins.

## **3. China Retail Foods-change and opportunity (中国零售食品-转型与机遇)**

简介: China remains one of the most dynamic retail markets in the world and offers great opportunities for U.S. food exporters. Exporters should be aware of several new trends that are changing China's retail landscape. Imported food consumption growth is shifting from China's major coastal metropolitan areas (e.g., Shanghai and Beijing) to the dozens of Second-and-Third Tier cities throughout China. China is experimenting with new retail models, such as 24-hour unstaffed convenience stores and expanded mobile payment platforms. E-commerce sales continue to grow, but major e-commerce retailers are competing for shrinking numbers of new consumers.
